1. Installation and Setup

This guide will walk you through the simple process of installing NewFiles and finding its settings panel.

Installation

1. From Unity Asset Store:

- Open the Unity Editor and navigate to Window > Asset Store.
- Search for "NewFiles" and click the "Download" or "Import" button.
- Once downloaded, a window will appear. Click **"Import"** to add the asset files to your project.

2. From a .unitypackage file:

- Open your Unity project.
- Navigate to Assets > Import Package > Custom Package... in the top menu.
- Locate the NewFiles.unitypackage file on your computer and open it.
- Click the **"Import"** button in the window that appears.

The asset will be installed into your Assets folder, typically under Assets/NewFiles.

Accessing the Settings Window

All features can be configured from the central settings window. To open it, navigate to the Unity top menu and select **Tools > NewFiles > Settings Window**. This will open the "NewFiles Settings" panel, where you can enable, disable, and customize all the features of the asset.

2. Folder Customization

Visually organizing your project folders can dramatically speed up navigation. NewFiles allows you to assign custom colors and icons to any folder in the Project window.

How to Customize a Folder

1. In the Unity **Project** window, locate the folder (or folders) you wish to customize.
2. Hold down the **Alt** key and **left-click** on the folder.
3. The **Folder Customization** window will appear next to your cursor.

The Customization Window

This window is your control panel for applying colors and icons. It features:

- **Color Section:** A predefined palette, a custom color picker, a history of recent colors, and a "No Color" button.
- **Icon Section:** A list of predefined icons, a history of recent icons, a "No Icon" button, and

a powerful **Icon Browser** to select any texture from your project.

Applying Changes

- **Apply:** Saves your chosen color and/or icon to the selected folder(s).
- **Reset:** Removes all customizations from the selected folder(s).
- **Cancel:** Closes the window without saving any changes.

You can also customize multiple folders at once by selecting them before Alt+Clicking.

3. Hierarchy Customization

Just like with project folders, NewFiles allows you to visually organize your scene hierarchy by assigning custom background colors and icons to GameObjects. When customized, the tool adds a lightweight HierarchyIcon component to the GameObject to store the data.

How to Customize a GameObject

1. In the Unity **Hierarchy** window, select the GameObject(s) you wish to customize.
2. Hold down the **Alt** key and **left-click** on the GameObject.
3. The **GameObject Customization** window will appear.

All changes are fully integrated with Unity's Undo system (Ctrl+Z / Cmd+Z).

4. Quick Access Toolbar

The Quick Access Toolbar is a productivity feature that adds a customizable bar of shortcuts to the top of your Project window.

How to Use the Toolbar

- **Adding Items: Drag and drop** an asset or folder from the Project window directly onto the toolbar.
- **Interacting with Items:**
 - **Left-Click:** Opens an asset or selects a folder.
- **Removing Items:**
 - Hover over an item and click the small × button.
 - **Right-click** on an item to instantly remove it.

5. Zebra Striping

Zebra Striping enhances readability in long lists by adding alternating background colors to rows in both the **Project** window (list view) and the **Hierarchy** window.

Configuration

This feature is highly configurable from the **Settings Window**. You can control:

- **Enable/Disable:** A master toggle for the feature.
- **Light & Dark Stripe Color:** Choose the colors for even and odd rows.
- **Global Opacity:** A master slider to control the transparency of the effect.
- **Only Folders:** An option to apply striping exclusively to folders in the Project window.

You can also quickly toggle the feature via **Tools > NewFiles > Zebra Striping > Toggle Zebra Striping**.

6. Settings Window Reference

The Settings Window (Tools > NewFiles > Settings Window) is the central hub for configuring every aspect of the asset.

- **General Settings:** A master switch to enable or disable all features.
- **Hierarchy Settings:** Toggles and opacity sliders for Hierarchy customizations.
- **Zebra Striping Settings:** Full control over colors, opacity, and application rules.
- **Quick Access Bar:** Settings for enabling the bar and adjusting item appearance.
- **Predefined Icons:** A list where you can drag and drop your favorite icons for quick access in the customization window.

7. FAQ & Support

Q: Will this asset affect my game's performance at runtime?

A: No. NewFiles is a 100% editor-only tool and adds no overhead to your final game build.

Q: Can I use any image as a custom icon?

A: Yes. You can use any Texture2D asset. For best results, use small, square images (e.g., 64x64 pixels) with transparency.

Q: How do I backup my folder customizations?

A: All customization data is stored in your project's EditorPrefs, which are tied to your local machine. To share settings, manual coordination is required as EditorPrefs are not typically part of version control.
